

Revision: A

chroma+scan 20x0 Release Notes

Version: 4.11.6.4 (previous version: 4.11.6.2)

New Features:

Support for A series sensors

This release supports the 2011A, 2021A, and 2041A sensors. The A models are compatible with all other 20x0 sensors. Additionally, the A sensors cannot be upgraded with a firmware package older than 4.11.6.4. The A sensors can be placed into a system running version 4.11.6.2 or newer. Sensors running the previous releases (4.11.5.4 and 4.11.6.2) are compatible with this station software (e.g., spare sensors running older firmware can be swapped into a system running 4.11.6.4 without having to run another upgrade).
