

SPR02 Sensor Discontinuation Notice

Posted on August 18, 2005

Dear LMI Customers,

For the past decade the Dynavision SPR02 has been providing the wood industry with a highly accurate profiling and measurement solution. With the improvements in scanning technology that LMI is making to our product mix we have decided that effective December 31, 2005 LMI will no longer be selling the SPR02 sensor. Support for and repair of these sensors will continue for years to come to ensure that the install base of these sensors and our customers are well supported.

In place of the SPR02 LMI is proud to offer the DLS2000 family of sensors. The DLS2000 offers improved performance with scan rates of up to 1.8 KHz, a more durable connector, improved accuracy, and all at a lower price than the SPR02. The DLS2000 sensors have already provided improved performance in applications such as log profile scanning for peelers, thickness detection for sorting and classification, and end of log detection.

If you require any further information regarding the DLS2000 models please visit our website at www.lmi3d.com to download the product brochure or give us a call at 604-636-1011.
