

Gocator Standard Model Updates

Posted on October 26, 2015

Gocator 1340-2M, 2340-2M

Due to popular demand, we have made Gocator 1340 and Gocator 2340 with 2M laser class available as standard models, in addition to the 3R and 3B laser classes.

Gocator 1380-3B

We are also adding Gocator 1380-3B to the Gocator 1300 series as a standard model. Gocator 1380 has a clearance distance of 127 mm and a large MR of 1.6 m. This makes it ideally suited for applications that require the sensor to deliver a large measurement range when positioned in close proximity to the scan target.
