

HexSight Version 4.3.1 Now Available

Posted on November 19, 2014

Dear HexSight User,

LMI Technologies is excited to announce that HexSight version 4.3.1 is now available — a free upgrade for users with version 4.0 and newer (see details below). This latest version release of HexSight includes new tools, additional flexibility to its powerful features, and performance improvements.

Highlight features of HexSight 4.3.1 include:

- The Locator, ArcFinder, LineFinder, and PointFinder tools have been modified to natively support the Gocator sensor's heightmap images.
- Evaluator Tool has been added: This tool converts results from other tools to Pass/Fail results using threshold comparison or mathematical operations.
- Output Tool has been added: This tool schedules a digital IO from a Gocator, based on a Pass/Fail result from an HSEvaluator Tool.
- The grids in the controls have been replaced with XP-themed grids.

A complete list of HexSight 4.3.1's features and improvements can be found in the release notes at downloads.lmi3d.com/sites/default/files/private/4.3.1.0-hexsight_release_notes.pdf.

Users who have HexSight 4.0 and newer can get their free version 4.3.1 upgrade by visiting the HexSight support page on our website at www.lmi3d.com/support/downloads/hexsight — no activation key required. For users with versions older than 4.0, upgrading your version to 4.3.1 requires the purchase of a new license. Please email LMI Technologies at orders@lmi3d.com to submit your order or to inquire further.

LMI Technologies is committed to HexSight's ongoing development and we welcome your feedback and suggestions on how to improve the HexSight experience. To submit your comments, or for any technical assistance you may require, please use the **Request a Support Ticket** feature on our support site at support.lmi3d.com.

Best Regards,
Chi Ho Ng
