Product Notice: HDI Advance and FlexScan3D Transition to Polyga

We are pleased to announce, effectively immediately, that sales, support and further development of the HDI Advance product family and FlexScan3D software is now being managed by Polyga.

Polyga is a Thomas Tong company focused on supporting the 3D reverse engineering market and is operating under license by LMI to oversee the HDI and FlexScan3D product line. Please address inquiries regarding HDI Advance scanners and FlexScan3D directly to Polyga (contact@polyga.com).

As part of this change, it is LMI's plan to phase out the HDI 100 series immediately and work with Polyga to offer FlexScan3D support for the Gocator 3000 series over the coming months. Please see the following link, "EOL: HDI 109, 120 END OF LIFE NOTICE" for more information.

Please contact LMI Technologies (contact@lmi3d.com) should you have any questions.
